
Retail Plus IMS

Release Version 7.0.3.1

Build on 06 August, 2024

New Features

✓ **Item-wise Restriction on Below Cost Validation for Sale Prices**

- Implemented a validation feature that can be controlled on a per-item or per-product basis. When this feature is enabled, it restricts the sale prices (1, 2, or 3) from being set below the purchase price of the item. This ensures that no item is sold at a loss.
- This validation is customizable for each item, meaning that users can enable or disable this restriction for individual products based on their requirements.
- If the restriction is enabled for a particular item, any attempt to set sale prices lower than the purchase price will be prevented, thus maintaining the profitability of sales transactions.
- This feature is particularly useful for businesses that want to ensure their sales prices cover costs and maintain margins, offering an additional layer of financial control.

✓ **Default Expiry Days Configuration**

- Added a new configuration setting to define default expiry days for products. This allows for consistent management of product shelf life across the inventory.

✓ **Display Expiry Days in Product Definition**

- Expiry days are now displayed in the product definition section if batch and expiry are enabled in the configuration. This provides clear visibility of product expiration information during setup.

✓ **Shelf Label Printing in Product Definition**

- Introduced a feature to print shelf labels directly from the product definition. This enhances the efficiency of creating and managing shelf labels for inventory items.

✓ **Product Type Packs/Unit in Purchase Invoice**

- Added the product type packs/unit option to adjust the conversion factor on purchase invoices. If the product type is set to 'unit,' the conversion factor will be 1. If set to 'pack,' it will use the pack's conversion factor, ensuring accurate unit conversion during purchasing.

✓ Withholding Tax Configuration

- Added a configuration setting for withholding tax. If enabled, advanced withholding tax will be displayed on the sale invoice, ensuring compliance with tax regulations.

✓ Customer Reports: Advanced WHT and Sales Tax List

- Added a new report under customer reports: "Customer Wise Advanced WHT and Sales Tax List." This report provides detailed insights into withholding and sales tax amounts for each customer.

✓ Auto Hold Estimated Bill Configuration

- Introduced a configuration setting to auto-hold estimated bills. When enabled, the estimated bill on the sale invoice will be held automatically, streamlining the billing process.

Release Version 7.0.3.1

Resolved Bugs

✓ **Item Wise Sale and Stock Summary Report**

- Resolved an issue where the report was displaying all products, both active and inactive. Now, only active products will be displayed, ensuring accurate and relevant reporting.

By updating to release updates provided by Gidsol (SMC-PVT) Ltd for Retail Plus IMS, users agree to these terms and conditions.
